

# The Five Major Risk Register Items Biochar Projects Need

## Feedstock Agreement

A long-term offtake agreement is a legal contract in which a buyer agrees to purchase a set amount of carbon credits at set price points several years into the future

## Offtake Agreement

Long term agreement for the procurement of the produced biochar for end use such as soil, water filtration, and concrete

## Technology Selection

The pyrolysis and or gasification technology that is going to be acquired to produce the biochar and generate the carbon offsets

## Carbon Project Partner

They work to identify, develop, and implement projects that have a real and measurable impact on greenhouse gas emissions. Carbon project developers support with LCA, carbon profiling, methodology selection, PDD support, MRV and much more!

## Offset Purchase

A long-term offtake agreement is a legal contract in which a buyer agrees to purchase a set amount of carbon credits at set price points several years into the future

# WHICH RISK ZONE DO YOU WANT TO LIVE IN?

The Greatest Alpha investment of our time, what is your targeted return profile?

## SCENARIO A

High Risk - High Alpha

Project developer status on key risk register items:
